

Design: Shaping Social Innovation

Multidisciplinary Innovation for Social Change (COST Action 18236) seeks to evidence approaches and methods that respond to social problems and influence international public policy discourse.

This event aims to develop a multidisciplinary appraisal of design in social innovation contexts. The programme includes: academic and practitioner keynote talks and discussions; experiences of social enterprises; and collectively we will discuss and build an exhibition based on our analysis of design work presented at Northumbria University.

DAY ONE
